

OpenMFD renders literature-inspired myelination, axon-guidance, and three-compartment assay layouts with the same pipeline used for Figure 1

A Myelination assay DXF outputs

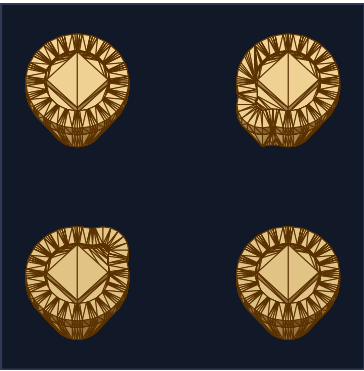

single unit

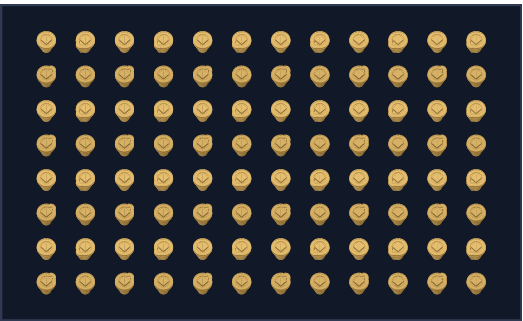

wafer-scale mask

B Myelination assay insert outputs

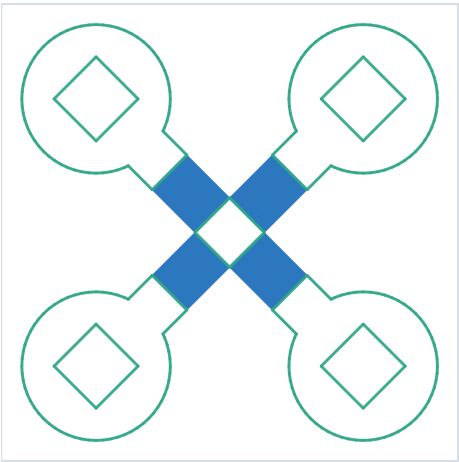

single insert

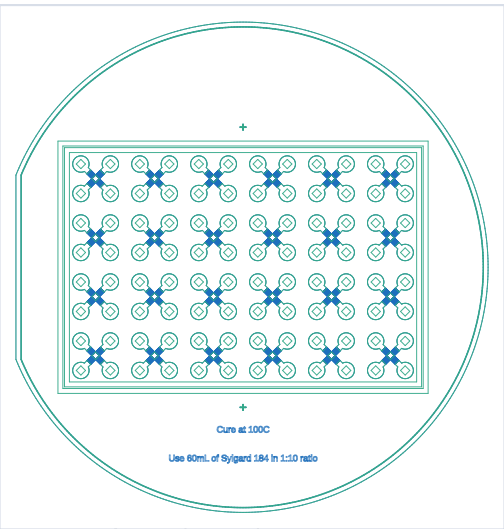

array insert

Rendered through the Figure 1 STL projection style from the generated insert geometry, with matching unit pitch, PDMS scale, skirts, and rotated lock-and-key pins.

C Axon guidance assay DXF outputs

single unit

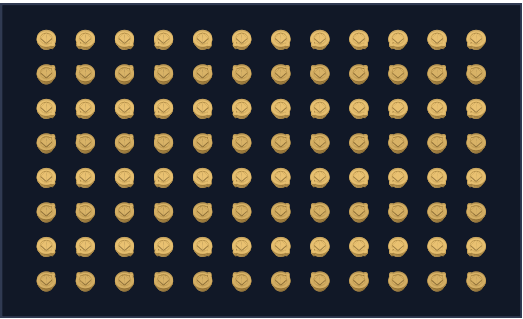

wafer-scale mask

D Axon guidance assay insert outputs

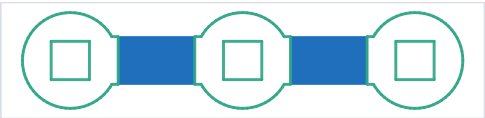

single insert

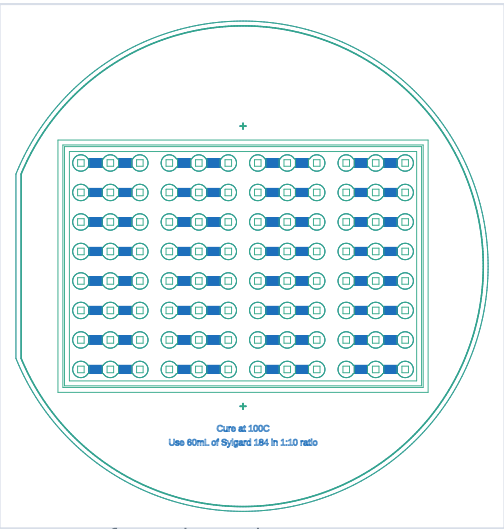

array insert

Rendered through the Figure 1 STL projection style from the generated insert geometry, with matching unit pitch, PDMS scale, skirts, and rotated lock-and-key pins.

E Three-compartment assay DXF outputs

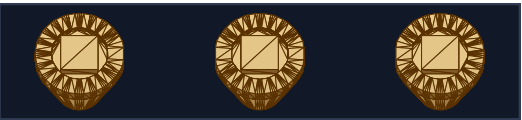

single unit

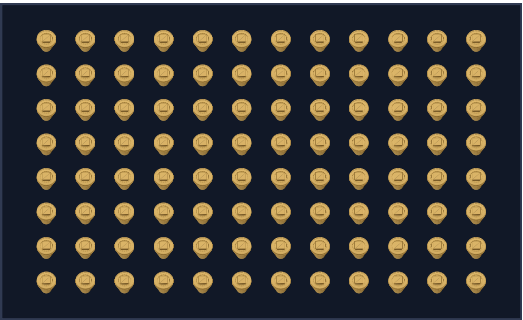

wafer-scale mask

F Three-compartment assay insert outputs

single insert

array insert

Rendered through the Figure 1 STL projection style from the generated insert geometry, with matching unit pitch, PDMS scale, skirts, and rotated lock-and-key pins.
